

Overview

Overview

From deep

DEEP Lab students have access to a number of server resources provided for the purpose of extending the capability and perpetuity of their desktop systems. In addition to those resources, Naval Postgraduate School provides access to the Hamming High-Performance Computing cluster available for to all NPS students.

All of the resources at NPS require that the student use the Cisco AnyConnect VPN client available at bouncer.nps.edu if they are accessing them from outside of the NPS campus, while NCR resources are unrestricted and available at their URLs directly.

Access for each of these resources is granted to the student often as they are required and requested.

At NPS

[DEEP Lab \(BE-13\)](#)

[CS Server Room \(BE-11\)](#)
