July CRUSER News

July’s issue of CRUSER News is now available:

In this month’s newsletter we take a look at some activities from international and commercial members of the community. The National University of Singapore (NUS) UAV Team describes their work and their recent success in the DARPA UAVforge Challenge. The Naval Postgraduate School has a long and successful history of working with the NUS and it is great to see our colleagues doing so well.

Exploring both the commercial and the global market side of UAS/RPAS activities we have an update from CRUSER member Keven Gambold. Some from information from our Librarian and some student thesis work rounds out the newsletter.
